Cardiovascular Integrated Physiology (CVIP) Clinic Referral

Primary Indication for Clinic Visit – Defined

Syndrome X: The patient will typically complain of exertional chest pain. To qualify for referral they must have non-invasive evidence of ischemia and a normal coronary angiogram. Non-invasive testing must include an abnormal graded exercise test with diagnostic ECG changes. Chest pain and/or abnormal perfusion scans alone will not be sufficient.

Syndrome Y or Coronary Slow Flow Syndrome: The patient will typically complain of paroxysms of rest pain and may present with a non ST elevation MI (NSTEMI). To qualify for referral they must have angiographic evidence of slow coronary flow in the absence of significant stenoses. Slow flow is defined as Thrombolysis in Myocardial Infarction (TIMI) 1-2 flow and/or a TIMI frame count of more than 40. We will be accepting NSTEMI with normal coronaries and patients with old Kawasaki's disease in this category.
